epidemic we provide empirical evidence that crack hit the high abortion early legalizing states harder and earlier we then demonstrate that using precisely the same treatment and control groups as joyce but extending the data analysis to encompass the lifetime criminal experiences as opposed to an arbitrary six year window the evidence strongly supports the hypothesis that legalized abortion reduces crime we also show that our original results are robust to focusing on only the cohorts born immediately before or after roe v wade the data suggest that ease of access to abortion rather than simply de jure legalization is a critical determinant of the extent of the crime reduction
